

CASTER CONCEPTS

BEYOND STANDARD

FOR IMMEDIATE RELEASE

Caster Concepts 91HD Caster Rated at 25,000 lbs.

New high-capacity caster fills market gap with cost-effective, durable mobility solution.

ALBION, MI — SEPTEMBER 21, 2026. Caster Concepts, a leading manufacturer of industrial caster solutions, is proud to feature the **91HD caster**. This addition to Caster Concepts' lineup fills a critical price-point gap in the market, offering a **cost-effective solution** for heavy-duty applications requiring superior strength and reliability.

"We understand the critical need for dependability and efficiency in high-capacity mobility solutions, notes Doug Backinger, VP of Sales at Caster Concepts. "The 91HD Single Ball Race Caster addresses our customers' needs for a product that solves operational demands while enhancing productivity and reducing downtime."

Higher Capacity with a Reinforced Design.

The 91HD caster is available in single and dual-wheel configurations, with an impressive load capacity of up to 25,000 lbs. per caster. Manufacturing, automotive, aerospace, defense, marine, and modular construction industries can rely on this caster for exceptional performance in high-stress and uncompromising environments.

Common industry challenges including caster failure, excessive maintenance costs, and ergonomic issues are minimized or eliminated with this new caster due to many benefits including:

- **Enhanced Capacity and Swivel Functionality** – The swivel section puts the ball bearing in a sheer load, providing greater strength and ergonomic operation when swiveling in a loaded state.
- **Reinforced Design** – The heat-treated raceway and yoke provide superior resistance to wear, impact, and deformation, increasing the caster's lifespan. Reinforced legs and platforms ensure stability and safety under extreme loads to minimize caster failure.
- **Maintenance-Optimized Features** – A Zerk fitting lubrication point and Shielded Swivel Bearing ensure easy maintenance and protection from contaminants, reducing downtime and service costs.

Availability & Contact
