

BoatClick brings Marine Chat AI™ to the IBEX Start-Up Pavilion

Ask any question about the boat you are standing on, and get an answer from verified data - not from a PDF

IBEX 2026	October 6-8	Tampa Convention Center	Start-Up Pavilion
-----------	-------------	-------------------------	-------------------

TAMPA, Fla. - BoatClick Digital Solutions will demonstrate Marine Chat AI™ live in the Start-Up Pavilion at IBEX 2026, October 6-8 at the Tampa Convention Center.

Marine Chat AI™ answers questions about one specific hull, by voice or text, from that boat's Live Digital Twin - a structured map of every system and component actually installed on it. It is a closed system: it answers only from data verified with the builder and its OEMs, and never teaches itself.

"There are still people who believe you can drop a stack of user manuals into ChatGPT and get something useful out of it," said Ori Gal, co-founder and CEO of BoatClick. "Anyone who says that has never read a boat's user manual. We built a model that answers precisely, because it sits on a structured digital twin of the exact boat - not on a pile of PDFs."

Live at the booth: a boat answering in under five minutes. Every major outboard and inboard engine range is already built, with the full verified knowledge layer behind each engine. That work is done - so most powerboats can have a working Marine Chat AI™ in under five minutes. Visitors are invited to name their own boat and watch it happen.

The platform runs from Leopard Catamarans, built end to end, through thousands of outboard-powered models, to fully custom mega yachts from Sunreef Yachts and Outer Reef Yachts.

Demonstrations run throughout the show. Meetings can be arranged in advance.

ABOUT BOATCLICK

BoatClick Digital Solutions builds the Boat Operational Live Digital Twin and Marine Chat AI™ for boat builders, OEM manufacturers and dealers worldwide.
