Cay Electronics to showcase CayCube – the award-winning alternative to traditional onboard power – at IBEX 2026

Portsmouth, RI – August 1st, 2026. After a successful pre-launch at the prestigious Newport Boat Show Innovation last fall, Cay Electronics will be showcasing the cutting-edge **CayCube** technology at the International Boat Builders' Exhibition and Conference, IBEX from October 6th to 8th 2026.

CayCube is the culmination of 40 years of maritime experience resulting in a revolutionary alternative to standard generators on board.

This solid-state, fire-safe system provides today's demanding boaters with the silent, fume-free power needed to replicate home comforts—from air conditioning and freezers to microwaves and personal devices—without the vibration or carbon emissions of a standard generator.

Another key feature of **CayCube** is the absence of moving parts, with installation requiring no costly plumbing or exhaust. The relatively compact device is entirely maintenance-free and remarkably easy to install and integrate into your vessel.

CayCube provides for an extended runtime up to 48 hours of support for air conditioning, appliances and essential equipment such as battery chargers or stabilizers.

Multiple fast recharging options include shore, generator, hybrid with dedicated alternator, as well as optional solar panels, for 100% sustainability on board with zero carbon emissions.

"We are thrilled to introduce CayCube to the market in the new season," said Rufus Van Gruisen, CEO at Cay Electronics. "This product underscores our commitment to providing a sustainable, effective innovation to shipyards, installers and boaters alike, while setting a new standard in marine comfort. "

Available in three high-performance models with peak power outputs of 9, 18, and 27 kW, **CayCube** offers the ultimate peace of mind for life on the water.

Visit us at Booth #1-409 IBEX 2026, in Downtown Tampa, Florida from October 6th to 8th to see this new technology in person.

About Cay Electronics

Cay Electronics specializes in electrical and electronic systems for the marine, mobile, and off-grid markets. It offers equipment and installations for powerboats, yachts, and commercial vessels, as well as for van and RV owners and outfitters. Serving clients in New England, the Caribbean, and beyond, we provide reliable solutions tailored to every need.
