Coastal Offshore X-Cellence Returns to IBEX with the Gyroline GL5

FORT LAUDERDALE, Fla. — October 1, 2026 — Coastal Offshore X-Cellence, Gyroline's exclusive North American master dealer, invites boatbuilders, dealers, and marine professionals to explore the **Gyroline GL5 at Booth 1-122** during IBEX, October 6–8 at the Tampa Convention Center.

Delivering **up to 11,700 Nm of stabilizing torque**, the GL5 combines powerful roll control with a compact footprint, quiet operation, and low power demand. Designed for low maintenance, it also provides straightforward access to service components, making ongoing upkeep simpler.

Its **patented mechanical damping system and active control technology** work together to automatically assess sea conditions and adjust the stabilizer's response, helping maintain effective roll control across changing speeds and sea states.

With **air- or water-cooling configurations**, the GL5 gives builders and installers flexibility to accommodate different vessel layouts. Whether integrating stabilization into a new build or upgrading an existing boat, the system is designed with installation and long-term serviceability in mind.

Featured in the **2025 IBEX Innovation Way showcase** as an Innovation Awards entrant, the GL5 returns this year with Coastal's team ready to discuss the details that matter to your project—from available space and power requirements to cooling options and service access.

Bring your vessel plans. Bring your questions. Visit **Booth 1-122** to see the GL5 up close and talk through what an installation could look like aboard your boat.

About Coastal Offshore X-Cellence

Based in Fort Lauderdale, Coastal Offshore X-Cellence specializes in marine electrical engineering, stabilization, navigation, power systems, and refits for boats and yachts. The company brings together technical expertise, leading marine products, and hands-on installation and service to support customers from the first upgrade conversation through ongoing maintenance.
