

Introducing FREEDOM Domes, setting a new standard for performance in a compact package.

For Immediate Release
Oakland Park, Florida, U.S.A.
June 29, 2022

New FREEDOM LTE-A Dome

Wave WiFi's FREEDOM LTE-A Dome combines a MIMO WiFi Transceiver

and a SIM activated cellular system in a convenient easy to mount format

The **FREEDOM LTE-A** Dome combines a Dual Band 802.11 N/AC MIMO (Multiple Input/Multiple Output) WiFi transceiver along with an LTE Advanced MIMO cellular system with a built in SIM slot. This allows users to access WiFi hot spots on shore or switch to cellular data sources for fast reliable internet connectivity.

The compact dome configuration, single wire (POE) power over ethernet detachable cabling, and standard marine 1"-14 mounting makes installation easy.

FREEDOM LTE-A with stainless steel surface mount (mount not included)

The **FREEDOM LTE-A** uses Wave WiFi's proprietary GUI (Graphic User Interface) which makes it easy to identify, choose and access internet sources. The **Freedom's** Dual Band capabilities mean it can connect to both 2.4Ghz and faster 5.0Ghz WiFi signals that many marinas now offer. When no WiFi signals are accessible the unit can easily switch to cellular data sources using the built in SIM slot and cellular antenna. For added convenience and when travelling in foreign ports the SIM card can be changed out to take advantage of local rates and prepaid programs.

Combine the **FREEDOM** Dome with one of Wave WiFi's routers/network controllers like the Dual Band broadcast **MNC-1200** to connect multiple onboard devices wirelessly. Add an MNC-1250 for an additional SIM slot for cellular redundancy and to be able to easily switch between cell sources.

Ellen Bradley, chief brand officer for NMMA discussing Discover Boating's research on the next generation of boaters says,

*"The **freedom** of being on the water, and the feelings associated with that **freedom**, were significant unifiers and influencers for boating... At the same time, the social connections and opportunities that uniquely come with boating, align with what both future and current boat owners are looking for. "*

*"We couldn't agree more, our new domes provide boaters the **FREEDOM** to be connected to the internet using our easy to mount compact hardware systems. It is a connected world and Wave WiFi products provide boaters top technology topside that helps them stay online."*

Jeff Graham, CEO Wave WiFi

The FREEDOM dome also comes in a WiFi only configuration for boaters that already have one of our SIM activated cellular systems onboard.

About Wave WiFi Inc.

Based in Oakland Park, Florida. Wave WiFi has been offering high tech mobile WiFi solutions for the marine market for nearly two decades. They specialize in mobile WiFi systems that help boaters stay connected. Their full suite of connectivity solutions includes waterproof external antennas, routers, both single and dual band broadcast network controllers, and access points for inside the vessel. Dual band WiFi, and SIM activated cellular transceivers facilitate connection to shoreside internet sources. Wave WiFi produces a wide range of hardware solutions that help boaters, RV owners, marinas, and anyone needing access to mobile internet, easy and effective connectivity, performance, and reliability.
