Ullman Dynamics is the world leader in suspension seats for High-Speed boats.

Ullman seats are the safest seats in the world, with a unique track record of 20,000 seats in military/professional use in more than 70 countries with zero injuries or ejections.

Ullman 3-D Suspension Technology handles lateral and vertical impacts up to 25 g, are the only seats in the world that require zero maintenance and backed by a 5-year suspension warranty.

At the Tampa Bay IBEX Show, you will see a variety of Ullman seats installed on various boats and on our showroom floor.

Visit Ullman Dynamics Booth 3-2236.... to sit down to discuss human factors and injury prevention.

We are proud to partner with boatbuilders that prioritize operator safety and innovation in hull design and science-based human factors.

Leading brands such as Disruptor Maritime - with their Rafnar “OK” Hull, Ocean Craft with their Project Perfect Storm Craft, Metal Shark Boats with their 37ft Human Factors Upgrade, Naples Yacht – with the Expeditionary Barge and Interceptor, and many high performance boat companies that invest in designing quality craft for challenging missions while preventing operator injury and fatigue.

President Ron Carpenter will be attending the show to provide insight into the State of the Science, prevention of boat impact-induced injury, human factors cockpit design, and how Ullman seats can reduce even the worst impacts by 50%.

*Having exhibited IBEX Show for many years has provided us with very useful feedback from operators of a variety of units, which help us with ideas for new concepts. “Our crusade is creating a cultural shift in the United States where boat operators are more educated on human factors. They understand the importance of operating boats in neutral spine and demand seats that reduce injury and fatigue, both laterally and vertically” “*says Ron Carpenter”.
