Innovative Lighting's New Bi-Color Bulkhead / Livewell Light

ROLAND, IA, August 14, 2019 - Innovative Lighting is excited to introduce a new addition to our existing LED bulkhead/livewell light series, the 011 series Bi-Color bulkhead/livewell light. This light comes with both blue and white LED's and operates with only two wires. To switch colors, simply turn off and on using the power switch and it will toggle between colors.

The Bi-Color light is not only a perfect fit for new OEM boat builds but also for upgrading existing boats because it adds a second color option without requiring the addition of an extra wire. The Bi-Color light is available with either the threaded barrel configuration, pictured, requiring a 11/16" hole or the "Shortie" with a rubber grommet which fits into a 3/4" hole.

The Bi-Color light operates at a range of 9 to 16 volts DC and draws only 25mA of power. It is sealed and waterproof and manufactured here in the U.S. at Innovative Lighting's facility in Roland, Iowa.

About Innovative Lighting
