**Blue Guard Innovations To Launch  
Smart Spill Switches & Sensors  
At IBEX 2018, Booth 3708, October 2-4**

BOULDER, COLORADO (USA) - Blue Guard Innovations (BGI) will formally introduce the industry to the BGI range of smart switches & sensors to detect oil and fuel spills at IBEX 2018 (booth 3708) in Tampa, October 2-4.

The innovative, patented range of solid state smart switches and sensors detect oil and fuel spills as well as water in the bilge and engine compartments, preventing them from accidentally discharging overboard.

The flagship product in the BGI range, the BG-One, (shown right) has been nominated for a IBEX product innovation award in the (WHICH CATEGORY?) category. The BG-One functions as a bilge pump switch that helps prevent oil or fuel from being pumped into oceans, lakes and waterways.

The BGI range also includes the BG-HW high water sensor and the BG-SWA, a combined bilge pump switch and high water alarm.

For more information about BGI products, visit booth 3708 at IBEX or [www.bluebgi.com](http://www.bluebgi.com).
