

Exploding Fish

Exploding Fish announces, IBEX 2018 trade show release, Exclusive product showing in America!

The all new Evolution 360, rotating rod holder is more of a revolution than an evolution. It completely revolutionises the conventional flush mount rod holder that bind you to a fixed rod position with no ability to adapt to environmental factors that can affect your rod and reel at any time while fishing.

Factors like wind, tide, current and wave action can all now be accounted for with these new rod holders, which allow you to rotate the rod up to 360 degrees and fine tune its position with the push of a button and come in three sleeve angles (0, 15 and 30 degrees) for even more flexibility.

Adjust your spread and angles at will when trolling, drifting, at anchor or bottom fishing and bring your rod tip inboard to adjust your rig. The all new Evolution 360 rod holders are set to revolutionise your fishing experience.

Exploding Fish is a new business involved in innovation in the marine industry. Proudly Australian, we have developed the Evolution 360, it is set to become a game changer in the fishing and boating industry.
