FOR IMMEDIATE RELEASE

Mr. Shrinkwrap to Showcase ShrinkCover and ShrinkShield at IBEX 2026

Custom-fit and heat-activated protection solutions support marine, modular, industrial, and equipment applications

PROSPECT PARK, Pa., Oct. 6, 2026 — Mr. Shrinkwrap is showcasing ShrinkCover™ and ShrinkShield™ at IBEX 2026, the International BoatBuilders' Exhibition and Conference, taking place Oct. 6–8 at the Tampa Convention Center in Tampa, Florida (Booth 1-201). The two solutions offer different approaches to protecting boats, modular buildings, industrial equipment, machinery, and other assets during transport, storage, and outdoor exposure.

Custom-fit protection for large assets

Built for boats, modular buildings, industrial equipment, and other large assets, ShrinkCover is a heat-shrink transport cover that forms tightly around the item it protects. It is designed to help reduce exposure to wind, moisture, road debris, rain, snow, ultraviolet (UV) exposure, and temperature changes. Its custom-fit format suits applications where loose coverage, movement, and exposure around the asset are concerns. ShrinkCover is made with ShrinkShield fabric and is compatible with professional heat tools and accessories used in shrink-wrapping applications.

Flexible heat-activated protection

Available in multiple roll sizes, ShrinkShield is a 7-mil, white, triple-layer shrink fabric for transport, storage, and industrial applications. It combines a low-density polyethylene (LDPE) exterior with a non-woven fabric backing to resist punctures, tears, and abrasion while supporting a tight shrink fit. Rolls are available in widths of 40, 60, 80, and 123 inches, with lengths that vary by width. The material is suited to boats, modular buildings, industrial equipment, and other materials requiring protection during transport or storage.

Two solutions for different protection requirements

ShrinkCover and ShrinkShield are complementary products. ShrinkCover is intended for customers seeking a custom-fit cover for a specific asset. ShrinkShield is supplied as roll material for customers who need flexible shrink fabric that can be sized and applied across different equipment and material-protection applications.

Both products use heat shrinking to create a tight protective covering. Final performance depends on the selected material, asset, installation method, heat-tool use, handling, storage conditions, and exposure environment.

Supporting protection across demanding environments

Equipment and materials can face wind, rain, snow, road debris, dust, UV exposure, and changing temperatures during transport or storage. A properly selected and installed shrink-

wrap solution can help create a more secure covering for assets exposed to these conditions.

Mr. Shrinkwrap (www.mrshrinkwrap.com) is presenting ShrinkCover and ShrinkShield to marine-industry professionals at IBEX 2026, Booth 1-201. Attendees can discuss product specifications, sizing, installation requirements, and potential applications with the Mr. Shrinkwrap team. For product information or help with a project, visit mrshrinkwrap.com or call 800-847-5290.

About Mr. Shrinkwrap

Mr. Shrinkwrap is a distributor of shrink film, shrink wrap supplies, installation accessories, protective products, and related equipment. The company operates from its main warehouse in Prospect Park, Pennsylvania, and ships products through its distribution network.

Mr. Shrinkwrap also provides on-site shrink-wrapping services for commercial, industrial, residential, agricultural, construction, marine, and packaging applications. Its team supports customers with product guidance, custom solutions, installation assistance, and specialized shrink-wrapping services for projects ranging from pallet-sized items to large structures and equipment.
