## **New 1/4" White End Cap from John Guest USA**

FAIRFIELD, NJ – John Guest<sup>®</sup> expands the PP Range of White Polypropylene Fittings to now include the 1/4" White End Cap for use in the Marine Plumbing Market including the Beverage Dispensing and Water Purification Markets.

Manufactured with food grade EPDM O-rings, these products also have a high chemical resistance to satisfy both food and pure water applications including reverse osmosis systems, water filters, ice makers, vending machines, and coffee brewing equipment. The end cap's push-fit technology allows for faster installation and disconnection purposes because no tools are required. They can be used with LLDPE tubing and are repeatedly reusable.

Both lead free and NSF 51 and NSF 61 certified, these end caps provide users with a leak-proof connection.

### **About John Guest USA**

Speedfit<sup>®</sup> Push-Fit Fittings and John Guest's Standard Line of Push-In Fittings are manufactured in Great Britain by John Guest Ltd. of Middlesex, England, a BS EN ISO9001 certified facility. The company operates multiple locations worldwide. John Guest USA, located in Fairfield, New Jersey, distributes products for the plumbing-heating, water treatment and automotive industries cross North, Central and South America, the Caribbean and the U.S. Virgin Islands.
