

## Yacht Sentinel unveils YS PRO: The Revolutionary "Connected Boat" Solution for Professionals and Boat Owners

PARIS - Yacht Sentinel, a leading provider of innovative boating solutions, proudly announces the launch of YS PRO, the ultimate "Connected Boat" solution designed to digitally transform yacht ownership, management and after sales service. With over 15 years of exceptional service to boating enthusiasts worldwide, Yacht Sentinel has now raised the bar even higher with the introduction of YS PRO and its comprehensive ecosystem, featuring a cutting-edge CRM for businesses and a user-friendly app for customers.

Charting a new course for the leisure boat industry, YS PRO harnesses the power of connectivity, following the automotive industry's successful integration of smart technology. The aim is to revolutionize boating, making it as effortless and enjoyable as possible for boat owners, while delivering exceptional value to shipyards and fleet managers.

YS PRO is a comprehensive connected solution, ensuring peace of mind to boat owners while providing shipyards with valuable data.

YS PRO is an extraordinary all-in-one product that combines a low-power consumption security system, an array of premium wireless sensors, and an advanced Big Data solution capable of collecting and analyzing all available data on the NMEA 2000 backbone. Moreover, it doubles as a super-fast Wi-Fi hotspot, offering affordability and convenience in one seamless package.

Protected by a premium waterproof rugged casing, YS PRO features a user-friendly touchscreen interface, making setup and operation a breeze. Seamlessly integrating with existing boat systems, all NMEA data is automatically detected and scaled, allowing for hassle-free retrofitting in under 30 minutes.

The Partner Platform CRM system, an integral part of YS PRO, empowers shipyards, dealers, and charter companies to forge strong relationships with their customers, while gaining invaluable insights into average boat usage. With the ability to receive alerts for unusual data,

customer support teams can provide proactive assistance, and dealers can schedule maintenance based on actual boat usage.

The user app, customizable for fleet managers, offers boat owners unparalleled access to a wealth of live and historical information, including battery status, fuel level, bilge pump activity, and precise positioning. Users receive notifications for any irregularities or impending maintenance requirements, with the added convenience of personalized customer support. Bolstered by a diverse range of premium wireless sensors, YS PRO also functions as a reliable security system, instilling peace of mind in boat owners.

Leveraging integrated NMEA Big Data solutions and employing edge computing, YS PRO can allow insurance companies to offer "black box premiums" as with the automotive industry and to enhance loss recovery, accurately apportion liability, and expedite claims settlement.

*"YS PRO is the culmination of extensive research and collaboration with our esteemed partners. It stands at the forefront of connected boat technology, poised to revolutionize the industry. We are thrilled to equip our first clients with this game-changing technology," said Romain Devismes, CEO of Yacht Sentinel.*
