## FOR IMMEDIATE RELEASE

### PRESS RELEASE: WET SOUNDS RELEASES THE WORLDS FIRST 12" MARINE TOWER SPEAKER

Rosenberg, Texas

Wet Sounds has revolutionized the marine audio industry once again! When we said something BIG was coming, we meant REAL BIG! A NEW **Revolution**. A NEW Standard. A NEW Lifestyle

"Wet Sounds has been building HLCD (Horn-Loaded Compression Driver) tower speakers for 16 years, long before many in the industry even existed as a brand. We redefined the standards of the marine audio industry in 2006 with the launch of our award-winning PRO Series - HLCD tower speakers, and we have now raised the bar once again with the release of our REV 12 HD" says Tim White, Co-founder and President of Wet Sounds.

The Revolution-HD series adds an even higher level of high-definition performance to the marine audio industry, bringing unprecedented volume and sound quality to a tower speaker design never achieved before.

With world leading performance and cutting-edge design, the REV series is **the** reference standard in the industry. Built upon the success of the **Revolution** Series, Wet Sounds took a ground up approach to develop a new REV TEC™ driver using proprietary materials to provide amazing mid-bass with a smooth yet powerful high frequency response.

The new **REV 12 HD** is **the WORLDS FIRST** 12" tower speaker.
