Next generation of tank monitoring system

We are once again introducing a completely new tank monitoring system, now with NMEA 2000 that gives you the exact level in multifunctional displays (MDFs) and other smart devices.

“We are extremely proud to be able to present this world news at IBEX in Tampa, Oct 3-5, US”, says the company's CEO, Anders Meiton, and adds "Everyone appreciates that the Gobius systems measure from the outside the tank".

Plug and play installation from your phone. Support for NMEA 2000 makes it easy to connect Gobius C to control system and external devices.

NMEA 2000, the network standard that enables devices from all different types of manufacturers to communicate with each other. Now is Gobius a partner in this big community.

The new Gobius C is equally suitable for all types of liquids, such as water, petrol, diesel, oil, gray and black water.

“This time we also invite developers to create their own application. Our Bluetooth protocol will be free and open for everyone”, says Anders Meiton in conclusion.

Please contact Anders Meiton when you want more information, anders.meiton@gobius.se / +46 316501.

Our booth at IBEX is 2-212
