

Leaning Post Slide

Making
Adventure
Easier

FORT MILL, SOUTH CAROLINA – Sea Otter Innovations will launch their debut product, the Leaning Post Slide, at IBEX 2022. The first-ever Leaning Post Slide has been entered into the IBEX 2022 Innovation Award competition. This unique design allows you to adjust your leaning post to the most comfortable position, whether you're fishing, cruising, entertaining, or relaxing at the sandbar. The universal bolt mounting design allows you to use your existing leaning post without drilling any holes in your boat.

Engineered and made in the USA, the Leaning Post Slide provides maintenance-free flexibility and options to simplify boating. Constructed from aluminum and stainless steel, it is designed to withstand even the harshest marine environments.

To operate, all you need to do is loosen the locks on either side and adjust the leaning post to the position that's right for you. The Leaning Post Slide will be featured at the Sea Otter Innovations booth at IBEX, September 27th – September 29th.

For more information about the Leaning Post Slide, visit the Sea Otter Innovations website <https://seaotterinnovations.com>, Sea Otter Innovations focuses on making adventure easier by developing innovative products while helping those impacted by natural disasters.
