SMARTPLUG PIGTAIL ADAPTERS KEEP VESSEL OWNERS PREPARED

Owners of SmartPlug Systems-equipped vessels are on the cutting-edge of shore power technology. Prepared vessel owners know they'll always be protected from electrical mismatches with a 4' SmartPlug Pigtail Adapter, no matter what marina dock pedestals offer.

SmartPlug Pigtail Adapters are designed for a safe, secure and simple user experience. Unlike the traditional shore power connectors that have L-blades and threaded rings to align, the SmartPlug presses straight in with no twisting required. Both the SmartPlug connectors and inlets are asymmetrical, which allows for easy one-handed alignment.

Constructed with tinned wire to minimize corrosion, SmartPlug Pigtail Adapters are built to last. The connectors are equipped with dual 316 stainless steel side locking levers that snap into place to reduce movement-caused stress. Superior gaskets eliminate dirt and moisture exposure to the electrical pins.

The SmartPlug C30043 Pigtail Adapter mates a 30A male SmartPlug boatside inlet and to a 30A female twist-type inlet. This is most commonly used to connect a SmartPlug boat to a standard shore power source if the owner's SmartPlug cordset is damaged or lost while away from their home port.

The SmartPlug C15043 Pigtail Adapter connects to a 30A male SmartPlug boatside inlet with a 115VAC three-prong connector at the other

end. This convenient adapter allows the vessel to plug into a traditional household-style electrical outlet, usually while on a trailer or at a dockside 115VAC receptacle.

The C30043 Pigtail Adapter from SmartPlug Systems has an MSRP of \$191. Model C15043 Pigtail Adapter is \$205.
