July 15th 2018

Tampa, FL-VersaChock launched **Tender Chocks** this month, which will be on display at the IBEX show October 2nd through 4th 2018, booth #4057. Tender Chocks are removable chocks designed to cradle rigid hull tenders, dinghy's and jet skis on boat decks/swim platforms, and docks. Tender Chocks consist of 4 low profile base brackets, which are permanently installed to the deck. Once the base brackets are installed, the removable chocks can be installed into the base brackets for use. When not in use, the chocks can be removed, leaving just the 4 low-profile base brackets, **keeping the deck free of trip hazards.**

Tender Chocks utilize super high-quality cast aluminum/marine white powder coated brackets/chocks. The bunks are made of marine grade white HDPE and include semi rigid rub strips to cushion and protect the hull. All components are UV and saltwater resistant. The very innovative design allows for most hull shapes and sizes making them versatile for switching out watercraft without switching chock systems! Tie downs required for securing watercraft (not included) Multiple patents pending.

Jefferson Design Inc (Manufacturer of VersaChock products) has over 32 years' experience in marine, automotive, and consumer product design, development, patents/trademarking, and manufacturing.
