For Immediate Release

Smart Skipper's Tender Towing Alarm System

Tender Towing Night or Day Without Worry

DENVER, Colo. – September 5, 2022 – [Blue Guard Innovations \(BGI\)](#), a global provider of remote boat monitoring and control solutions, announced a major addition to their Smart Skipper™ product line: **Tender Towing Alarm system** meeting insurance requirements for night or day towing.

Towing a tender during the night or day requires constant vigilance. Depending on the length of the trip, sea conditions, and crew fatigue an easy-going trip can be turned upside-down with the loss of a tender.

The Smart Skipper **Tender Towing Alarm System** with its two GPS receivers continuously syncing and providing location of the tender will alarm via audible sirens and strobe lights to alarm the crew if the tender is left behind. The **Tender Towing Alarm System** aids in locating and expedites recovery of the separated tender. It is a completely wireless system with the most robust and advance BLE Mesh communication topology.

The system can be easily expanded to include AIS tracking activation with the **Track Mate Alarm System** and several other Smart Skipper alarm functions such as High-Water Alarms, Critical Battery conditions, and many more.

Blue Guard Innovation will be presenting the Tender Towing Alarm System at the [IBEX Trade Show](#) in Tampa, FL, September 27-29 in Booth [3-2127](#)
