For Immediate Release

Smart Skipper's Track Mate Alarm System

Integrating AIS Satellite Tracking

From the dock to the open ocean - Alert and Track stolen vessels with robust, security, connectivity, and control

DENVER, Colo. – September 5, 2022 – [Blue Guard Innovations \(BGI\)](#), a global provider of remote boat monitoring and control solutions, announced a major addition to their Smart Skipper™ system. Delivering real-time satellite tracking and geofence alerts, the Track Mate works in conjunction with Automatic Identification Services (AIS) global satellite transponders to activate tracking at the first indication of theft.

Track Mate seamlessly integrates with Smart Skipper™, enabling users to configure their system and remotely arm and disarm security functions. Real-time alert notifications and automatic AIS activation upon unauthorized entry and/or geofence violation assist in the recovery of the vessel by GPS and satellite tracking. For immediate security deterrence measures, users can connect sirens/horns, lights, and cameras that will automatically activate upon intrusion. Smart Skipper's cloud system provides users with worldwide access to their vessel's information via computer or mobile devices.

In the case of primary power loss, Track Mate Alarm System is self-contained with a 5-day rechargeable battery backup that is fully capable of powering and taking complete control over the AIS satellite transponder. Offering secure and reliable location-based services, Track Mate is well suited for open central cockpit fishing and recreational boats as well as large vessels.

It is a completely wireless system with the most robust and advance BLE Mesh communication topology.

Blue Guard Innovation will be presenting the Track Mate Alarm System at the [IBEX Trade Show](#) in Tampa, FL, September 27-29 in Booth [3-2127](#)
