VISTA DEBUTING NEW PRODUCT AT IBEX 2021

ELKHART, IN, July 13 — Vista Manufacturing, Inc. will debut Vista Gateway — our new NMEA2000 lighting interface for the marine industry — at the IBEX 2021 trade show in Tampa, Florida from September 28 through September 30.

“Vista Gateway is an innovative and cost-effective solution that gives marine manufacturers master control over their boat lighting with a multi-function display,” said Curtis Hollinger, National Sales Manager.

This centralized RGBW control via **six** independent light outputs offers the ability to program and customize marine lighting with a simple, multi-function touchscreen display, based on the latest NMEA2000 protocol. The user-friendly module also simplifies design and functionality challenges that manufacturers previously had to mitigate by bringing all lighting connections to a centralized location.

Manufacturers can stop by Booth 3-308 to meet the Vista team and learn how Vista Gateway can give their customers the controllability they’re looking for.

ABOUT VISTA

Vista is a lighting manufacturer that produces a competitive advantage for customers by merging quality and innovation with cost-effective pricing and on-time delivery. Since 1971, Vista has helped OEMs and engineers win in the marketplace with innovative, efficient lighting solutions.
