

## SNAGGED LINES AND FALLS OVERBOARD AVOIDED WITH POP-UP CLEATS

Snagging a line on a cleat while docking could have serious consequences, as can stubbing a toe and falling overboard. Both are easily avoided with Accon Marine's 202 Series of innovative Flush Mounted Pop-Up® Cleats. At the touch of a button, they raise to provide all the holding power of a standard cleat then retract back flush into the deck or gunwale for a clean, uncluttered appearance.

A 202 Series Pop-Up Cleat is available for virtually any size boat. They're offered in 4-1/2", 6", 8" and 10" models and accommodate line ranging from 1/2" to 1" in diameter. They have a minimal height for use in a wide range of locations. Made from gleaming, marine-grade 316 stainless steel, they're practically maintenance-free and simple to install.

Each 202 Series Pop-Up Cleat comes with a robust stainless steel backing plate that serves as a template. Installation requires a small cutout and four 3/16" holes. The 4" model is through-bolted with screws, while the 6", 8" and 10" sizes can be ordered as either through-bolt or hidden stud mount. Backing cups with a threaded nipple are available for locations that need to drain into the bilge. A video is at [bit.ly/popupcleat](http://bit.ly/popupcleat).

Accon Marine's 4-1/2" Pop-Up Cleat retails for \$114.42. The through-bolted mount 6" is \$124.28; the 8" \$164.06; and the 10", \$256.50. The 6" stud mount is \$131.87; the 8" is \$168.39; and the 10" is \$269.55. They have a lifetime warranty.
