## BETTER WAY PRODUCTS OPENS MISSOURI PRODUCTION FACILITY

One of the largest OEM composite manufacturers in the US, Better Way Products has opened a production facility in Lebanon, Missouri. The 25,000 sq. ft. plant will service the needs of boatbuilders in the southern Midwest with high-quality fiberglass components and small parts.

The new facility is part of a larger initiative to manufacture where its customers are based. Central Missouri is home to many monohull and pontoon builders. Better Way Products has also invested heavily in state-of-the-art tooling such as 7-axis water jet trimming and resin transfer molding that results in fiberglass that's completely smooth on both sides.

"For over 30 years, Better Way Products has distinguished itself with its capability to fabricate fiberglass of the highest quality, from small and complex to over 40' long," said Clint Decker, business unit director. "This move represents a commitment to our customers and their respective regional manufacturing communities."

Headquartered in New Paris, Indiana, Better Way Products works in a wide range of industries. The company offers design, engineering, prototyping and production using the latest technology and tooling.
