BETTER WAY PRODUCTS EXPANDS INTO SOUTHEAST

Better Way Products, one of the largest OEM composite suppliers in the US, has opened a manufacturing plant in Valdosta, Georgia. The facility provides boatbuilders throughout the Southeast with premium quality large and complex custom fiberglass components and small parts.

Strategically located in close proximity to several current customers, the 75,000 sq. ft. Valdosta manufacturing plant reduces transit time and shipping costs for Florida boatbuilders. Better Way Products recently opened a similar facility in central Missouri that has proven to be highly successful. Beyond components such as consoles, hardtops, doors, hatches and other small parts, the location makes and ships the company's line of superior quality dock boxes.

Better Way Products has made significant investments in composite technology at all its locations. Tooling such as 7-axis water jet robots and resin transfer molding (RTM) make it possible to achieve a completely smooth finish to the interior of fiberglass parts, without sacrificing dimensional tolerances.

"Opening the Georgia plant is part of our larger strategy to centralize production where our customers are," said Clint Decker, business unit director. "It allows us to keep pace with boatbuilders as they ramp-up production and reinforce our business relationships."
