LED LAMP DELIVERS SPOT, SPREAD AND COMBINATION LIGHTING

There is often a need for both spot and spread lights onboard, but precious little space for a multitude of fixtures. Hella marine's Sea Hawk-470 Combi LED Work Lamp is a multi-functional light bar that offers both types of illumination and even allows them to be used simultaneously. Its sturdy corrosion-proof design, low power consumption and powerful light output make it a reliable option for anything from illuminating a deck to long range sighting of objects.

The lamp's three settings are close range spread illumination, long range spot lighting and combination, making it invaluable for a wide array of applications. It can be positioned at any angle due to its friction end caps, making it ideal for illuminating decks, walkways and docks. It mounts with SS brackets and is 20.63" W x 2.24" H x 2.64 D". A video demonstrating the versatility of Sea Hawk-470 models is at bit.ly/2NTfAL2.

A rugged Grilamid® Lens affords an unparalleled combination of durability against impact, continuous UV stability and resistance to common cleaning products and chemicals. It will not dim or dull over the life of the light.

The Sea Hawk-470 Combi LED Work Lamp utilizes a thermally conductive polymer housing. This innovative material draws heat away

-more-

from internal electronics. The corrosion risks presented by the harsh marine environment are minimized, as an aluminum housing is no longer necessary.

Hella marine's multivolt circuitry facilitates operation between 9V and 33V from a 12V or 24V supply. Spot and spread light modes each draw just 18W.

The Sea Hawk-470 Combi LED Work Lamp is protected by a 5-year warranty. It is available with black or white housings, and optional double SS mounting brackets enable stacked twin bar installations. Retail prices range from \$325 to \$379.
