JMP MARINE PUMPS COVER 41 NORTHERN LIGHTS GENSET MODELS

Northern Lights has built a reputation on supplying the marine industry with durable generator sets, a vast number of which are still in service. JMP Marine offers a wide range of high-quality replacement engine cooling pumps and flexible impellers for 41 of these long-lasting 4.5–32 kW workhorses. They're direct replacements for OEM pump models 25-11202, 25-12007, 25-12057 and 25-15405.

JMP Marine manufactures its Northern Lights replacement pumps in its advanced ISO 9001-certified facility. Offering 100% compatibility and engineered to deliver massive flow, their bodies are heavy-duty cast bronze and machined to exacting tolerances. Corrosion-resistant fittings, stainless steel wear plates, O-ring seals instead of gaskets and marine-grade, non-magnetic shafts are used to ensure a long, reliable service life.

Each replacement pump comes with a JMP Marine flexible impeller. Renowned within the industry, they're made from a proprietary wax-infused polymer that resists salt, oil, chemicals and excessive heat. US Navy testing found they outlasted other brands by a two-to-one margin.

JMP Marine replacement engine cooling pumps for Northern Lights generator sets come with a one-year manufacturer's warranty and start at \$371 MSRP. The company also offers models for Onan and Westerbeke.
