JMP ADDS TO YANMAR REPLACEMENT PUMP LINEUP

Both recreational boaters and commercial mariners trust the Yanmar name for exceptional durability and long-lived power. But when their seawater cooling pumps need changing, savvy owners turn to JMP Corporation. A true drop-in replacement, its new model JPR-YM07IP expands the company's commitment to covering Yanmar's entire lineup.

Like all its products, the JPR-YM07IP replacement seawater cooling pump is manufactured to exacting standards in JMP's ISO-9001 certified factory. This commitment to quality means 100% plug-and-play compatibility.

The JPR-YM07IP is superior to the OEM model. JMP designed the self-priming high-performance pump for maximum flow capacity through its heavy-duty cast bronze body. Only corrosion-resistant fittings, a marine-grade 3X-series non-magnetic shaft, machined steel pulley and mounting bracket, and O-rings instead of gaskets are used. This both minimizes maintenance for the boat owner and enhances product reliability.

The JPR-YM07IP features JMP's renowned flexible impeller. Tested and approved by the US Navy, it's made from a proprietary wax-infused blend that resists oil, chemicals and extreme heat, and outlast other brands two to one.

JMP Corporation's JPR-YM07IP replacement seawater cooling pump fits Yanmar engine models 2GM20, 2GM20VE, 2GM20B, 2GM20C, 2GML, 3GMD, 3GMLE, 3GM30, 3GM30VE, 3GM30B and 3GM30C. It has an MSRP of \$342.
