NEW RARITAN FLUSH PANEL BUILT FOR RELIABILITY, ADAPTABILITY

The new Raritan Multifunction Flush Panel offers water-conscious toilet operation in a long-lasting, trouble-free design that's engineered for simple installation. It can be mounted vertically or horizontally to fit available space, and is rated for use in wet heads.

The Raritan Multifunction Flush Panel has three functions: flush, empty and fill. Manual operation enables efficient clearing of the bowl to save onboard water supplies and reduce black water accumulation.

Built for reliability, the Raritan Multifunction Flush Panel has silver-plated butt contact switches and doesn't rely on a control board or relays. Suitable for shower installation, the front of the unit is IP66-rated and sealed against water splashes and dust. Ideal for OEM or refit, it meets requirements for USCG regulation 183.410, UL 1500 and ISO 8846 for Ignition Protection.

The Raritan Multifunction Flush Panel is simple to connect to any pre-wired toilet. It offers a choice of mounting positions—horizontal, vertical or angled—and can be repositioned later with the included tool. It measures 4-3/4" L x 3-1/4" W and costs \$195.

For over 60 years, generations have relied on Raritan quality and durability. Renowned for its range of marine sanitation equipment, it also manufactures ice makers, water heaters and other innovative equipment.
