## NEW RARITAN DIVERTER VALVE FITS STANDARD 1-1/2" FITTINGS

Many polymer marine valves will only accept unique fittings. Not so with the new full-flow Diverter Y Valve from Raritan Engineering. It'll take any standard 1-1/2" NPT fitting commonly available from a plumbing supply or hardware store, reducing costs and installation time.

The body of the Raritan Diverter Y Valve is made from durable, high-strength ABS plastic. It won't rust, corrode or become brittle over time. A removable handle satisfies No Discharge Zone requirements.

Available with or without 1-1/2" barb fittings, any port of the Raritan Diverter Y Valve is easily configured as the input. A set of labels are included for clear identification of the user-defined inlet, overboard, holding tank, MSD, toilet, macerator pump and/or deck fitting ports. Mounting clamps are provided for bulkhead installation.

The Diverter Y Valve from Raritan Engineering costs \$89.99 with barb fittings and \$75.99 without. They come with a one-year warranty.

Generations of boatbuilders and owners have relied on Raritan Engineering's quality products since 1958. Renowned for its complete range of marine sanitation equipment, it also manufactures ice makers, water heaters and other innovative boating accessories.
