## WEBASTO LAUNCHES Ti22 ProX CHILLER SERIES

Being out on a boat in a warm breeze is pleasant, but there are times when cool air is needed, especially for sleeping. With the new Ti22 ProX Chiller™ Series from Webasto, it's easy to add a state-of-the-art comfort solution to virtually any medium to large yacht or workboat. Featuring standard reversible heat, its fully modular nature makes it ideal for new builds and as a direct replacement for existing systems. Designed specifically for the US market, it debuts at IBEX, September 28–30, Tampa, Florida, booth 3-915.

Because it's a direct, drop-in replacement for competitor's systems, the Ti22 ProX Chiller has identical sea water and chiller water connections and fittings, and wiring patterns. Plus, their footprint is the same as competing products making upgrading to a Webasto system fast and easy.

Ti22 ProX Chiller modules are offered in 36, 48, 60 and 72 kBTU/h. Up to six units can be connected together and managed using a single Webasto MyTouch controller and a multiple-stage electrical box. The strong and durable American-made titanium condenser and scroll compressor provide maximum reliability and a long service life.

The Ti22 ProX Chiller is available in 230V-1ph and 230V-3ph power versions. It's 50/60Hz compatible and works with an Altivar 320 frequency drive. Amperage draw is nominal, no matter the kBTU/h rating.

-more-

Simple to plumb to new or existing standard fittings, the Ti22 ProX Chiller uses a 1" hose barb for the seawater connection and a 1" female NPT thread on the chilled water side. It uses the commonly available R407C refrigerant. It's compatible with Webasto's robust line of BlueCool A-Series accessories including its A-Series Air Handlers and MyTouch Digital Controller.

Setting up the Webasto Ti22 ProX Chiller is simple. It has a standard USB port for configuration and easy troubleshooting. With the available MyTouch color touchscreen display, it's easy to optimize temperature settings throughout the vessel.

The Webasto Ti22 ProX Chiller is extremely compact; to save on space, individual modules are stackable. With units available for immediate shipment, competitive pricing starts at \$11,500.
